

Atlas Portfolio & Entry Radar

Executive User Guide & Quantitative Strategy Playbook

System Architecture: FastAPI + React / TypeScript

Multi-Source Consensus: SA Quant / Wall St / Zacks

Real-Time Quotes: Yahoo & Alpaca Feeds

1. Workspace Navigation & Modules

6 Integrated Hubs

Workspace Tab	Core Intelligence & Analytics	Primary Actions
Portfolio	Real-time inventory of holdings, true daily moves (Today %), unrealized P&L, sector heatmap, and concentration caps.	Rebalance book, export CSV, switch active portfolios, trigger live quote refresh.
Signal Center	Objective 0–100 technical scoring combining momentum, trend strength, moving averages, and portfolio fit.	Filter Strong Entry / Approaching, inspect RSI and MACD drivers.
Watchlist & Entry Radar	Candidate screening command center: multi-source ratings consensus + 5-point setup validation + price targets.	Review setup drawer, arm automated entry triggers, launch strategy backtester.
Analytics & Risk	Institutional risk diagnostics: Portfolio Beta, 95% Value-at-Risk (VaR), correlation matrix, SPY/QQQ benchmark tracking.	Stress-test shocks, inspect sector exposure, analyze asset correlations.
Catalysts	Forward corporate events: Earnings releases (BMO/AMC), dividend calendar, yields, and distribution safety scores.	Pre-earnings risk audit, dividend capture timing, event alerts.
Alerts	Central armed trigger hub for Price, RSI, and Risk Drawdown conditions, trigger history log, and Telegram push dispatcher.	Create custom threshold triggers, review fired alerts, configure Telegram bot.

2. Portfolio Execution & Performance Tracking

Real-Time Book

Table & Heatmap Visualizer

- Today % Column:** Displays single-day performance calculated strictly against the prior trading day's official close (`closes[-2]`), completely separated from cumulative unrealized return.
- Unrealized Return (\$ / %):** Tracks cumulative open profit or loss from original acquisition cost basis.
- Interactive Treemap:** Color-coded by daily performance with rectangle sizes proportional to total portfolio capital weight.
- Dynamic Sorting:** Click any header to instantly sort by Today %, Total Return, Score, or Position Weight.

Action Toolbar & Portfolio Switcher

- ⚡ Refresh All Data:** Fetches latest real-time prices, re-evaluates all indicators (RSI, SMAs, MACD), and recalculates book metrics.
- Scale / Rebalance & Trade:** Automatically produces trim and buy orders to maintain position ($\leq 20\%$) and sector ($\leq 35\%$) guardrails.
- Portfolio Switcher:** Instantly switch between uploaded files (e.g. `AHAD portfolio 17092026.xlsx`) or live brokerage accounts.
- Export CSV:** One-click extraction of complete portfolio state for accounting and external reporting.

The **Watchlist & Entry Radar** evaluates candidate stocks through a strict 5-point quantitative gate. Candidates passing all criteria earn the **STRONG ENTRY** status, highlighting prime risk/reward setups.

1

Multi-Source Ratings Consensus
Synthesizes Seeking Alpha Quant (algorithmic factor model), Wall Street Consensus (sell-side analyst targets), Zacks Investment Research (earnings momentum), and Investing.com into a normalized 0–100 scale. Ensures rigorous multi-firm validation.

Score ≥ 65 / 100

2

RSI Momentum Buy-Zone
Filters out dangerous overbought extremes (RSI > 70) while targeting candidates consolidating or reversing out of oversold territory with accelerating positive momentum.

38 ≤ RSI ≤ 58

3

Moving Average Trend Alignment
Demands confirmed structural alignment: Market Price must trade above an upward-sloping 50-day Simple Moving Average, which in turn must remain above the institutional 200-day trendline.

Price > SMA50 > SMA200

4

Volume Accumulation Confirmation
Confirms that price movement is backed by real institutional liquidity. Trading volume must match or exceed the trailing 20-day average volume to validate institutional accumulation.

Relative Volume ≥ 1.0×

5

Consensus Target Upside Potential
Calculates margin of safety based on mean analyst price targets. Guarantees that the expected reward meaningfully justifies the capital at risk before opening a position.

Upside ≥ +15.0%

4. Signal Center: 0–100 Scoring Engine

Ranking Algorithm

Technical Score (0–100)
Calculated using 4 quantitative sub-components:

- RSI Momentum (25 pts)
- Trend Alignment (30 pts)
- MACD Crossover (25 pts)
- Volume Breakout (20 pts)

Portfolio Fit Adjuster
Dynamic multiplier based on active portfolio risk:

- Concentration Penalty:** -15 pts if position > 18% or sector > 30%.
- Diversification Bonus:** +5 pts for underrepresented high-alpha sectors.

Action Status Pills
Clear trade directives derived from composite score:

STRONG ENTRY ≥ 75 & 5/5 setup

APPROACHING 60–74 or 3–4/5

NEUTRAL / TRIM < 60 or overbought

Candidate Radar Controls

- Review Setup:** Expands setup drawer with individual metric scores and price targets.
- 🔔 Arm Trigger:** Sets an automated limit alert when price reaches target entry level.
- Quick Add:** Input any ticker symbol + optional investment thesis note.

Automated Market-Aware Sync

- Regular Hours:** Automatic live refresh every 30 minutes.
- Pre / After-Market:** Scheduled refresh every 60 minutes.
- Manual Override:** Click *Sync Now* anytime to immediately pull article analysis and quotes.

5. 5-Point Strategy Backtester

Historical Simulation

Simulation Parameters

- **Entry Threshold** (Default: 75): Minimum composite score required to open a simulated trade.
- **Take-Profit Target** (Default: +15%): Closes trade when price hits target gain.
- **Stop-Loss Guard** (Default: -5%): Cuts position if trade moves against thesis.
- **Time-Stop Barrier** (Default: 20 days): Exits position if neither target nor stop is triggered within 20 trading sessions.
- **Lookback Windows**: Selectable across 6mo, 1y, 2y, or 3y daily historical data.

Performance Analytics & Audit

- **Benchmark Comparison**: Direct alpha and return comparison against SPY (S&P 500 ETF).
- **Risk Metrics**: Displays Sharpe Ratio, Win Rate %, Profit Factor, and Maximum Drawdown.
- **Equity Curve Chart**: Visualizes strategy account trajectory vs. buy-and-hold benchmark.
- **Trade Ledger**: Full audit log detailing Entry Date, Exit Date, Realized Return %, and Exit Reason (TARGET , STOP_LOSS , TIME_STOP).

6. Armed Triggers & Telegram Push Notifications

Continuous Monitoring

Trigger Types & Management

- **Price Level Alerts**: Trigger when price moves ABOVE resistance or BELOW dip-buy entry target.
- **RSI Alerts**: Trigger on momentum reversals (e.g. RSI crossing below 40 or above 70).
- **Risk Drawdown Alerts**: Automated alerts for portfolio-wide drawdown or sector breaches.
- **Armed State**: Background worker evaluates all active triggers every market cycle.

Telegram Bot Integration

- **Real-Time Delivery**: Instant mobile notifications when any trigger fires.
- **Actionable Alerts**: Messages include ticker, trigger price, current RSI, and setup grade.
- **Zero Polling**: Runs autonomously on the background worker server.
- **Configuration**: Set Bot Token and Chat ID in Settings • Alerts tab.

Institutional Daily Operating Playbook

- Step 1 — Morning Scan**: Open *Watchlist & Entry Radar* to review candidate stocks scoring 4/5 or 5/5 on the criteria gate.
- Step 2 — Empirical Validation**: Click 📊 *Backtest* on prime candidates to confirm positive alpha and win rate in recent market regimes.
- Step 3 — Risk Check**: Open *Analytics & Risk* to verify that adding the position will not breach the 35% sector cap or spike portfolio Beta.
- Step 4 — Order Dispatch / Arm Trigger**: Click 🔔 *Arm Trigger* to notify when entry price is reached, or execute directly via *Scale / Rebalance*.
